PROFESSIONAL PROFILE

Early-career AI workflow and QA practitioner with hands-on portfolio work in authority-boundary evaluation, adversarial testing, acceptance criteria, traceable evidence, and human-in-the-loop execution controls. Published a dependency-free JavaScript evaluator that applies terminal STOP logic within an ordered STOP > HOLD > CLEAR hierarchy, supported by a versioned defect and regression-test history. Brings additional experience from aviation maintenance, customer support, sales, and operational work. Seeking roles in AI evaluation, AI assurance, agent reliability, technical AI governance, QA automation, or technical support.

CORE CAPABILITIES

AI evaluation and assurance • Agent reliability • Adversarial and boundary testing • Test design and regression • Requirements and acceptance criteria • Human approval and execution controls • Evidence traceability and technical documentation • JavaScript • Git and GitHub • SQL and PostgreSQL • Customer support and issue handling

SELECTED TECHNICAL PROJECTS

OmniEcho Core v0.3 | Public portfolio project

2026

- Designed and published a dependency-free JavaScript authority-boundary evaluator implementing the KOMPAS Core Design Canon v0.1.
- Implemented a frozen assessment with three ordered decisions—STOP, HOLD, and CLEAR—where STOP is terminal and cannot be weakened by a later gate.
- Published the v0.1-to-v0.3 history, including a severity-ordering defect, adversarial findings, corrective revisions, and regression tests named for the defects they cover.

KOMPAS and Navigator Runtime R4 | Independent AI workflow and verification project

2026

- Defined a layered control architecture separating human authority, system analysis, navigation, execution control, adapters, and independent verification.
- Converted governance rules into explicit state transitions, permission boundaries, negative cases, acceptance criteria, and reproducible verification records.
- The preserved project evidence records 53 of 53 unit tests and 24 of 24 PostgreSQL tests passing for the frozen R4 implementation; the same evidence explicitly limits the claim to a prototype rather than a production deployment.
- Used AI systems as implementation executors while retaining ownership of requirements, completion criteria, review decisions, and final authorization.

[Supporting portfolio and claim evidence](#)

Evaluation and Governance Prototypes | Independent research work

Jul-Sep 2026

- Recorded failure conditions and success thresholds before reviewing results, reducing the risk of changing criteria after an outcome was known.
- Maintained explicit evidence levels—independently checked, repository-recorded, self-reported, and scope-limited—and kept unpublished or statistically unvalidated work clearly labelled.
- Ran a governance audit against a ledger schema, reproduced permission and integrity defects, corrected the constraints, and re-tested the rejected cases.

PROFESSIONAL EXPERIENCE

Technician Mechanic | Electra Trans Global OOD

Jun 2026–Present

- Work in an aviation maintenance environment where procedural discipline, technical attention, documentation, and safety awareness are essential.
- Apply a careful, verification-oriented working style developed through both mechanical work and independent QA projects.

Sales Consultant | Filbo

Apr 2025–May 2026

- Supported customers with product selection, day-to-day communication, and sales-related problem solving.

Manager | MAXROY EOOD

Dec 2022–Jun 2025

- Held responsibility for day-to-day operations and customer-facing work in a small-business environment.

Operator | Results CX Bulgaria

Aug 2023–Jun 2024

- Handled customer interactions and issue resolution within a structured contact-centre environment.

Call Centre Representative | Eircom

Feb 2022–Jun 2022

- Built practical experience in customer communication, clarification, and structured handling of requests.

Server | Belstone Ventures

Jun 2021–Feb 2022

- Worked in a fast-paced service environment requiring reliability, prioritisation, and direct customer care.

EDUCATION AND PROFESSIONAL DEVELOPMENT

Marine Navigation Studies | Higher education coursework — not completed

- Studied marine navigation, developing familiarity with structured procedures, situational awareness, responsibility, and safety-critical decision contexts.

Software Quality Assurance | Two courses — completion pending

- Completed most coursework across two QA courses and added approximately three months of independent practical QA project work.
